Technical drawing of a mechanical linkage system. The drawing shows a horizontal arrangement of components. On the left, a vertical plate (labeled 4) is connected to a horizontal arm. This arm is part of a linkage system that includes a spring (labeled 34) and a vertical rod (labeled 75). The spring is connected to a horizontal rod that passes through a vertical plate (labeled 100). The vertical plate has a central hole with a diameter of 70. The horizontal rod is connected to a vertical rod (labeled 5) on the right. The vertical rod has a diameter of 12 and is connected to a horizontal arm. The horizontal arm is connected to a vertical plate (labeled 100) with a central hole of diameter 70. The vertical plate has a width of 100 and a height of 65. The horizontal arm has a length of 120. The vertical rod has a length of 245. The spring has a length of 75. The vertical plate (labeled 4) has a width of 90 and a height of 65. The vertical plate (labeled 100) has a width of 100 and a height of 65. The horizontal arm has a length of 120. The vertical rod has a length of 245. The spring has a length of 75. The vertical plate (labeled 4) has a width of 90 and a height of 65. The vertical plate (labeled 100) has a width of 100 and a height of 65. The horizontal arm has a length of 120. The vertical rod has a length of 245. The spring has a length of 75.

技术说明

- 1.边角去毛刺，锐角倒圆弧角R2处理；
- 2.表面镀锌处理；
- 3.折弯成型，无明显扭曲变形。
